

# SafeSense®

Bed Exit assistance system

# SafeSense® for greater freedom

This innovative early-warning system to notify staff when the patient leaves the bed is a reliable aid in everyday nursing care. The smart bed sensor technology helps to prevent falls and ensure greater mobility for the patient.

24/7 patient control

## SAFE PATIENT MOBILITY

The nursing staff can immediately respond and assist the patient.

After the set interval has elapsed, the SafeSense® system will send a signal to call staff/nurses.

- Prompt assistance if the patient falls.
- A high degree of safety during night and weekend shifts, when there are fewer members of staff.
- The system can also trigger the alarm if the patient tries to climb over the side rails.

# and safety

## FOR BETTER ORIENTATION

When the patient gets out of the bed, the built-in night light automatically turns on, which greatly facilitates orientation and makes the patient more independent. After the patient returns to the bed, the light switches off automatically.

## FLEXIBLE TIMING

The timing of the system for calling staff can be set as an instant alarm (0 seconds) or at intervals of up to 30 minutes.

- Flexible use after the patient's physical and mental condition have been assessed.
- Individual settings to suit the patient's degree of mobility.

## SYSTEM INTEGRATION

The system is quick and easy to install using P&P connectors on a compatible bed, as needed.

# SafeSense®

Patient

- Promotes independent mobility
- Minimises the risk of falls
- Automatic night light

- Staff are quickly informed if the patient leaves the bed
- Option to use individual settings
- Easy to control

Management

- A high degree of safety
- Compatible with system for calling nurses
- Minimal maintenance costs
